Enterprise Web Application Development (CS - 383) Lab 4

Bootstrap

The aim of this Lab is to use bootstrap framework to create a simple website. Refer to the online bootstrap guide for more help.

Your website must meet the below requirements:

1. Download the Bootstrap starter template and use it to create your website.

2. Create a folder for your website and copy only the files you need in your website from the starter template. Including files that are not needed to affect your grade.

3. Modify the template provided to create your website. You can add your own files as well. Your website should contain 5 pages at least.

4. All pages should navigate to each other. Make sure that you don't have broken links

5. The following components must be implemented in your website at least once:
   a. Grid System
   b. Typography
   c. Code blocks
   d. Tables
   e. Alerts
   f. Buttons
   g. Navbars
   h. Popovers
   i. Tooltips

6. Your design should be responsive and it should show that for small view ports and above.

7. After you finish, compress your website folder and submit to the LMS.
